

Food Delivery Aggregator System

Streamlining online food orders and revolutionising restaurant operations

The Challenge in Food Delivery Today

Platform Overload

Restaurants juggle multiple delivery platforms—Uber Eats, DoorDash, Grubhub, Deliveroo, and more—each requiring separate attention and management

Operational Chaos

Staff are overwhelmed managing separate tablets, switching between systems, and coordinating orders across different interfaces simultaneously

Service Impact

The result: slower service times, increased order errors, frustrated customers, and exhausted employees struggling to keep pace

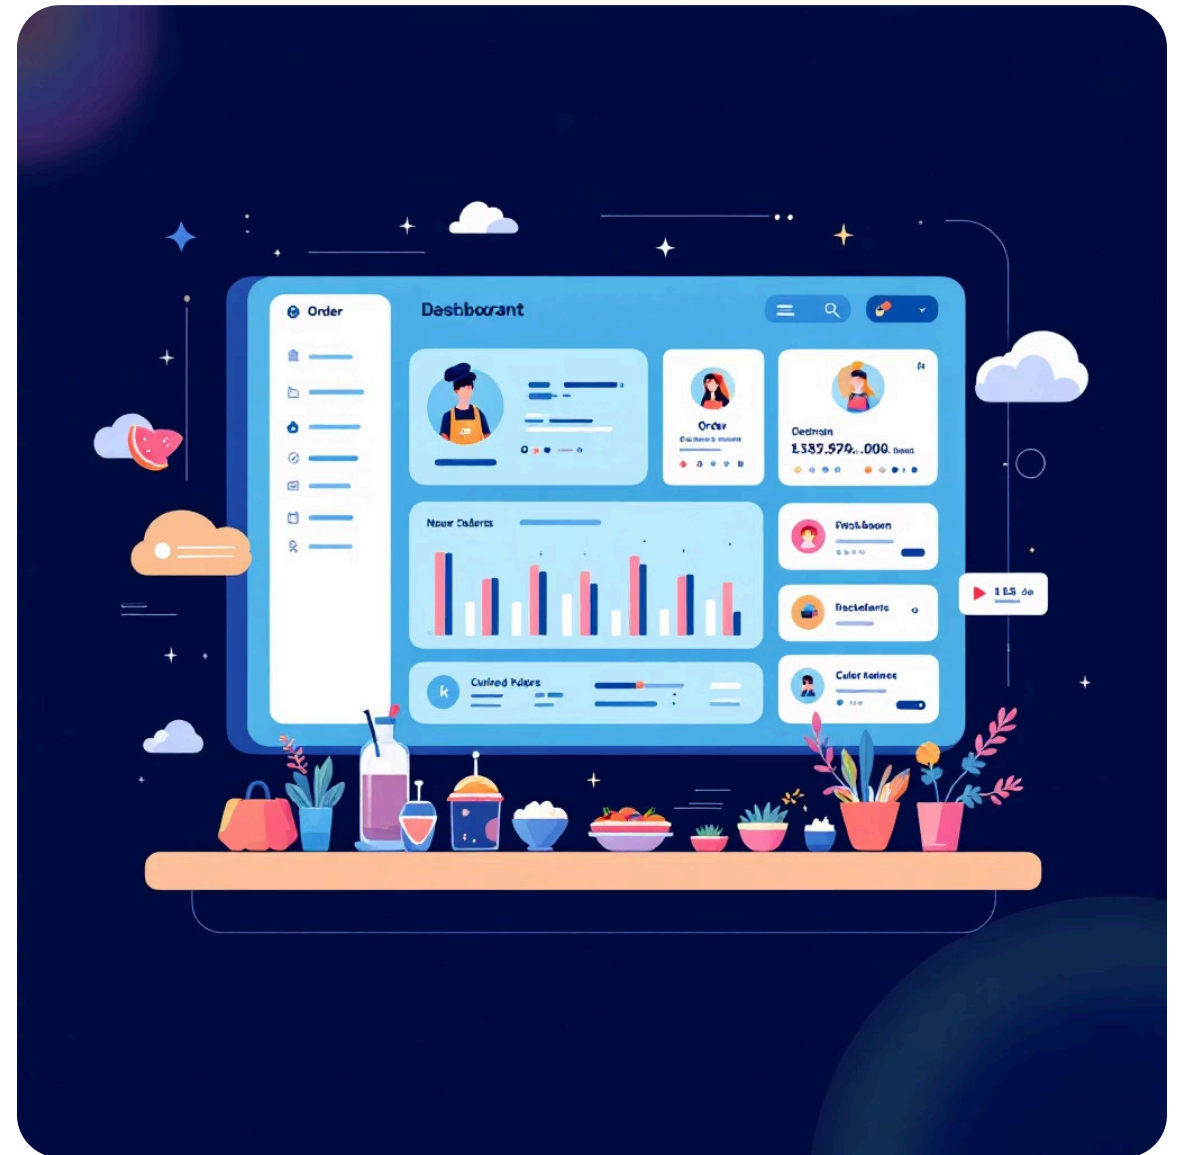

What is a Food Delivery Aggregator?

The Solution

A food delivery aggregator is an intelligent software platform that revolutionises how restaurants manage their digital orders.

It consolidates orders from multiple delivery applications into one streamlined, easy-to-use dashboard.

The system automates order flow directly to kitchen operations and point-of-sale systems, eliminating manual data entry and reducing errors.

01

Consolidation

Unifies all delivery platforms

02

Automation

Streamlines order processing

03

Integration

Bridges restaurants, services, and customers

How Our Aggregator System Works

Customer Orders

Customers place orders through various third-party delivery apps (Uber Eats, DoorDash, Deliveroo) or directly via the restaurant's own website or mobile application

Unified System

All orders automatically funnel into a single, unified aggregator platform—eliminating the need for multiple tablets and reducing manual order entry

Kitchen Integration

The kitchen receives real-time, sequenced orders via an integrated Kitchen Display System (KDS), ensuring efficient preparation and optimal workflow

Seamless Processing

Payment processing, order tracking, delivery coordination, and customer notifications are all integrated seamlessly within one comprehensive platform

Key Features of Our System

Centralised Order Management

Consolidate orders from all delivery platforms—Uber Eats, DoorDash, Grubhub, Just Eat, Deliveroo—into one powerful, intuitive dashboard

Real-Time Order Tracking

Monitor every order from placement to delivery with live updates, GPS tracking, and automated customer notifications throughout the journey

Kitchen Display Integration

Seamlessly connect with Kitchen Display Systems for optimised order sequencing, preparation timing, and improved kitchen efficiency

Transform your restaurant operations with our comprehensive aggregator system—reducing errors, increasing efficiency, and delighting customers with faster, more reliable service.
